

Kit for Experimental Mathematics

EQ356

Function

Teaching renovates itself constantly and new generations seek more interactivity. Teachers need to adapt to and innovate when teaching the same concepts.

With mathematics, that is no different! Therefore, in order to provide complements to theories and make lessons even more interesting, we present you the EQ356.

A set of experiments aimed at changing the way students learn algebra, functions, equations, theorems, ratios and proportions, angles, triangle similarity and trigonometry, turning it into something that is completely practical, dynamic and experimental.

Knowledge areas

Mathematics

Level

Graduation - Technical education - High school - Elementary school
